

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Session Code: AAC-006 Integrating Speech Recognition into AAC Technology

Susan Koch Fager, PhD, CCC-SLP
Institute for Rehabilitation Science and Engineering
Madonna Rehabilitation Hospital, Lincoln, NE
Tom Jakobs, PE, Invotek, Inc., Alma, AK

January 29, 2015; 9:20-10:20

Handouts are available at: www.atia.org/orlandohandouts

1

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Learning Objectives

- Attendees will be able to identify 3 challenges individuals who rely on AAC face in communicative interactions using current technology.
- Attendees will describe the impact of integrating natural speech in AAC interactions.
- Attendees will describe 2 strategies and/or modifications to current AAC technology to promote natural communicative interaction.

Handouts are available at: www.atia.org/orlandohandouts

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Madonna Rehabilitation Hospital
Lincoln, NE

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Institute for Rehabilitation Science and Engineering

Developing technologies and treatments to help eliminate barriers and solve rehabilitation challenges

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Collaborative Research

- Invotek, Madonna
 - Long history of SBIR projects
 - www.invotek.org/research/

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

- Penn State, OHSU, Invotek, Madonna

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Grant funding support

- National Institutes of Health
 - NIDCD
 - Effective Self Expression for People with Severe Speech Disorders
 - 1R43DC012734-01

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Disclosures

- Madonna Rehabilitation Hospital does not have a financial relationship with the sale of the technology presented in the project
- Invotek, Inc. is the developer of the prototype technology presented today. Invotek, Inc. sells the speech recognition software (SSR) that the prototype is based upon. The prototype described in the presentation is not currently a commercially available product.

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Background/Rationale

- Desire to use natural speech is innate
 - Automatic
 - Source of identity
 - Allow for more natural timing in interaction
 - Able to "hold the floor" compared to device-mediated interactions
- AAC technology tends to serve as a "replacement" for speech

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Prototype description

- Speech recognition based on models of dysarthric speech
 - SSR (Supplemented Speech Recognition)
 - Incorporates speech, first letters of spoken words are typed, word prediction
- Fager, S., Beukelman, D., Jakobs, T., & Hosom, J.P. (2010). Evaluation of a Speech Recognition Prototype for Speakers with Moderate and Severe Dysarthria: A Preliminary Report. *Augmentative and Alternative Communication*, 18, 48-55.

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

- Forward facing monitor
 - User essentially has subtitles, can turn on or off
- Synthesized speech output if desired/needed

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

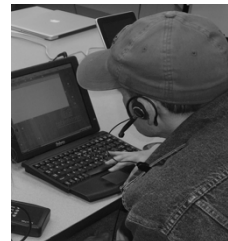

How the prototype works

- User types the first letter of the target word
- They speak the word
- The SSR attempts to recognize the word
 - If recognized it is inserted in the line of text
 - If not, the word may appear in the word prediction list and the user can select if from there
 - Or user can spell the word out letter-by-letter
- What is written is displayed on the forward-facing monitor to the listener

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Supplemented Speech Recognition

1. Automatic speech recognition based on models of dysarthric speech
 - System is further customized by individual user
2. First letter identification (alphabet supplementation)
3. Word prediction

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Alphabet Supplementation

(Sentence: "The nurse will bring my snack")

A B C D E	REPEAT
F G H I J K	START AGAIN
L M N O P	END OF WORD
Q R S T U	END OF SENTENCE
V W X Y Z	1 2 3 4 5
	6 7 8 9 0

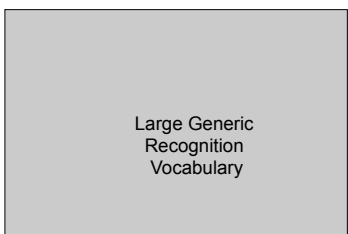

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

How SSR functions

- User types the first letter of the target word
- User says the word
- Word shows up in line of text (most probable) OR
- Word is available on one of 6 word prediction buttons (next 6 probable word options) OR
- User has to type the word

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

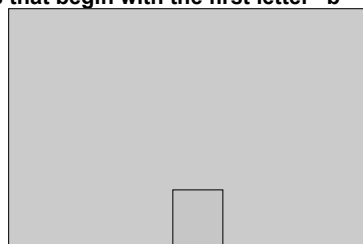

Traditional Vocabulary

Large Generic Recognition Vocabulary

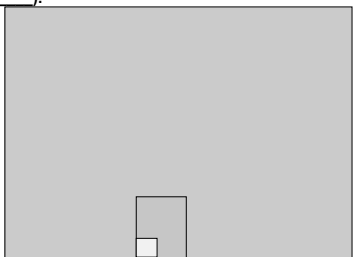

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Words that begin with the first letter "b"

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Words that begin with a given letter of the alphabet "b" and occur following a specific word (The "b" _____).

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

SSR video

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Evaluation

- The goal of the evaluation is to assess how this new method of supporting an AAC interaction impacts the listeners behavior.
- Hypotheses:
 - Listeners engagement as measured by on-task behavior and eye-gaze will increase during the RealTalk condition compared to traditional AAC condition

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Conditions

- Traditional AAC (no speech, just text to speech with word prediction)
- RealTalk (prototype AAC system that incorporates supplemented speech recognition)

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Participant

- Speaker with dysarthria
 - Female with CP, 74% sentence intelligibility, research assistant
- 5 listeners
 - 1 male, 4 females
 - 2 students in speech pathology, 1 accounting professional at rehab hospital, 1 IT manager at rehab hospital, 1 administrative assistant at rehab hospital

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

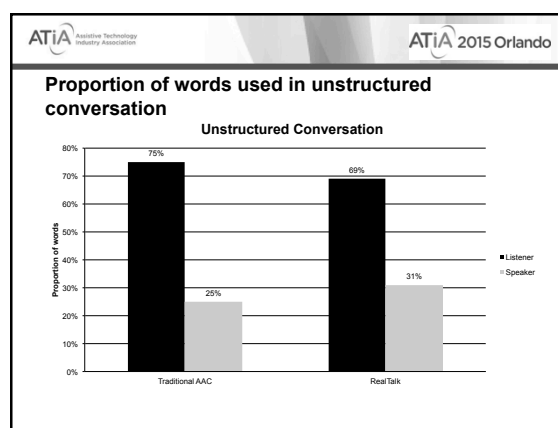

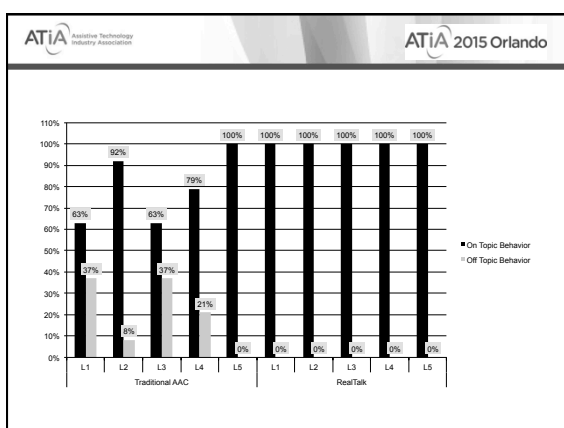

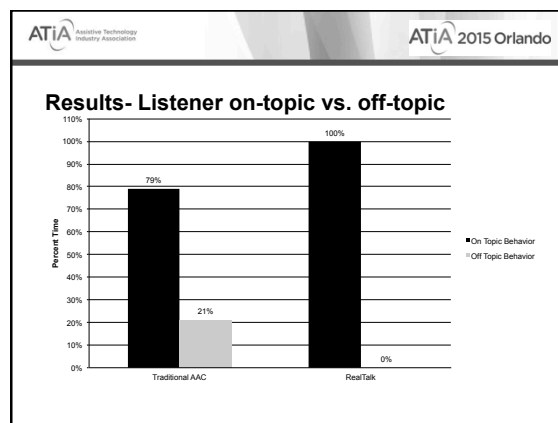

Tasks

- Unstructured conversation (introduction, hobbies, pets/ vacations)
- Structured barrier tasks
- Tasks randomized per condition, per listener

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Analysis

- Qualitative analysis of gaze behavior of listener
 - All interactions video-recorded, transcribed, timed and coded for gaze behavior (on topic vs. off topic)
 - On topic- focused on speaker or task
 - Off topic- looking around room, focusing gaze on other objects in environment, engaging in conversation with 3rd party
- Proportion of words per participant (unstructured conversation)
- Qualitative feedback on comfort and preference of technology being used in a communicative interaction with the speaker

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Usage Statistics

Traditional AAC	RealTalk
• Keystrokes: 377	• Keystrokes: 267
• Corrections: 108	• Corrections: 4
• Word Prediction: 118	• Word Prediction: 28
• Keystroke Savings: 13.41%	• Keystroke Savings: 61.2%
• Communication Rate: 7.2	• Communication Rate: 11.22

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Preference and qualitative comments

- All listeners preferred RealTalk to the traditional AAC condition for day-to-day communication with a communication partner
- Comments:
 - L5: "When she wasn't talking the technology seemed in the way. When she was talking it seemed more helpful during the conversation."
 - L3: "I didn't know what to do or look at during the [traditional AAC] part. I felt uncomfortable."
 - L4: "I was able to focus and pay attention when she was talking."
 - L4: "I felt like I knew more what was going on when I could hear her talk."
 - L1: "The time delay in the traditional AAC condition felt unnatural. It felt more natural to be able to listen to her speech during the interaction."

Video

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Future Directions

- Wider range of participants with dysarthria
 - New participant= 17% on sentence intelligibility
- Analysis of familiar vs. unfamiliar listeners
- Use of video clips across a wide range of listeners for more qualitative information on perceived level of comfort and preference, etc.

ATiA Assistive Technology Industry Association ATiA 2015 Orlando

Acknowledgements

- We wish to thank the listeners and speaker with dysarthria who participated in the project results presented today.
- The Rehabilitation Engineering Research Center on Augmentative and Alternative Communication (RERC on AAC) is funded under grant H133E140026 from the National Institute on Disability, Independent Living, and Rehabilitation Research (NIDILRR), located in the Administration for Community Living of the Department of Health and Human Services. The contents do not necessarily represent the policy of NIDILRR.

Thank you for attending this session

- CEUs – Session Code: AAC-006
 - More info at: www.atia.org/CEU
 - For ACVREP, AOTA and ASHA CEUs, hand in completed Attendance Forms to REGISTRATION DESK at the end of the conference. Please note there is a \$15 fee for AOTA CEUs.
 - For general CEUs, apply online with The AAC Institute: www.aac institute.org
- Session Evaluation: <https://www.surveymonkey.com/r/AAC-006>
 - Please help us improve the quality of our conference by completing your session evaluation form.
 - Completed evaluation forms should be submitted as you exit or to staff at the registration desk.
- Handouts
 - Handouts are available at: www.atia.org/orlandohandouts
 - Handout link remains live for 3 months after the conference ends.

Handouts are available at: www.atia.org/orlandohandouts
